Since there is no distinction between grammar and lexicon in CxG, all kinds of linguistic information can be taken into account in the form pole. Nevertheless, speakers are not troubled by this multifunctionality but they seem to know what a particle means and be able to use it in different contexts. Kroon 1989 on *nam*, *enim*, *igitur*, and *ergo*; 1992 on several particles; 1994a on *at*; 1994b on Latin equivalents of Dutch *maar*; 1995 monograph on *nam*, *enim*, *autem*, *vero* and *at*; 1998 on a framework for Latin discourse markers; 2004, 2005, and 2009 on *quidem*; Kroon and Risselada 1998 and 2002 on *iam*.

It indicates either presuppositionally shared information or shift in thematic orientation. One classification strategy is to contrast discourse markers with other categories, such as conjunctions, but this dichotomy has been criticized. The obtained DMs in this study were analyzed carefully by the researcher and errors in translation were identified.

The data used is always drawn from actually spoken or written language; CxG does not use constructed examples. Whether it means say or thought is often clear from the context; both meanings are often used in the same narrative in very informal speech. First, coherence approaches, which cover a variety of pragmatic frameworks, aim to explain how particles and discourse markers help speakers and hearers construct relations in discourse.
