## Understanding Forestry Terms: A Glossary for Private Landowners

Natural regeneration is easier but may be slow and irregular; it can only renew existing forests with the same sorts of tree that grew before. In practice, the cycle can range from 5 to 10 years, with more Southern States having approached full implementation than States in other regions.

## Lunch and Learn: The Oregon Forest Industry Directory

As far as I can tell, site indices in Douglas County are confusingly based either on 100 or 50 year tables; it was helpful for me when DOR specified that the 50 year table was used for our properties. For those ownerships that are indeed owned by a man and woman who are a couple and given the fact that women tend to outlive men, the number of female primary decisionmakers is likely to continue to increase, as indicated by the large percentage of female owners listed second in the 2013 NWOS. These analyses will need to be confined to those elements of the survey that were asked in comparable or, ideally, identical manners in both iterations, an important constraint that needs to be acknowledged.

## Central Hardwood Forest Products Markets

For example, on a 10-year cutting cycle in a hardwood stand, trees are harvested every 10 years.

## Societal Expectations from Family Forestry in the USA and Europe

Forest products companies employ foresters to buy timber from private lands.

## Tree Growth Tax Law Information: Be Woods Wise: Forest Policy and Management: Maine Forest Service: Maine DACF

Land owner characteristics and perceptions in northeast and southeast Missouri: The economic and social value of flood plain agroforestry to rural development projects. Most landowners cannot afford this, and would have a hard time affording this good stewardship activity to keep their

forest healthy. **TIMBER STAND IMPROVEMENT TSI** — Improving the quality of a forest stand by removing or deadening undesirable species to achieve desired stocking and species composition.
