Magnetic Resonance Imaging or MRI provides 3D images of the brain or other body structures using magnetic fields and computers. Be wary of population figures that say that about 2%-5% of the school population has a certain type of learning disability, because disability may have been defined as being the bottom 2%-5% in the first place.

The 4 Types of Validity

The answer is that anyone can. If a person is having problems at work or school, or in personal relationships, tests can help a psychologist understand whether he or she might have issues with anger management or interpersonal skills, or certain personality traits that contribute to the

problem.

WISC V

Practitioners want tests that can help them design interventions that will actually improve children's learning; that can distinguish between children with different conditions, such as a learning disability or attention deficit disorder; and that will accurately measure the abilities of children from different linguistic and cultural backgrounds. Individuals with Disabilities Education Act IDEA A. Having a child undergo assessment for learning disabilities is a complex and confusing process for most parents.
