Suni

Horns are present only on males; in the suni is less marked than in Bates's pygmy antelope. Males have horns 8—13 cm 3—5 in long, that are ridged most of their length and curve backwards close to their heads. A male usually takes one mate, but other females may share his territory.

Suni

The nostrils are prominent red, and there are black rings around the eyes and above the hooves. They are social but males defend a territory of about three hectares. Suni feed on leaves, fungi, fruits and flowers, and need almost no free water.

Suni

When a predator is almost on top of them, they spring out and bound away into the underbrush. They scent-mark the boundaries with secretions from their.

Suni

The belly, chin, throat and insides of legs are white.

Suni

The suni stands 33—38 centimetres 13—15 in at the shoulder; the head-and-body length is typically between 57 and 62 cm 22 and 24 in. Bovids of the World: Antelopes, Gazelles, Cattle, Goats, Sheep, and Relatives.
