Description of the upland economy: areas of outstanding beauty and marginal economic performance, K. .

## Drivers of Environmental Change in Uplands

A number of world-class experts provide a review of cutting-edge natural and social science and an assessment of past, current and potential future management strategies, policies and other drivers of change. Clean and regular water supplies, renewable energy, carbon rich peatlands, good opportunities for walkers and tourists, sustainable agriculture and forestry, and some of the best protected areas for wildlife in Europe all rely on sound and integrated land management practices. The outcome is in addition to change on the ground an interesting collection of papers that demonstrate the complexity of upland issues and the breadth of topics that must be considered in thinking about how best to safeguard ecosystem services and achieve sustainable upland management.

## Drivers of Environmental Change in Uplands, Routledge Studies in Ecological Economics by Aletta Bonn

It is essential reading for planners, conservationists and environmentalists and all those concerned with the future of the uplands. They face imminent threats as well as opportunities from pressures such as climate change, changes in land management and related changes in fire risk, increases in erosion and water colour, degradation of habitats, altered wildlife and recreational value, as well as significant changes in the economy of these marginal areas. Thompson Policy and Advice Manager, Scottish Natural Heritage Chairman of the UK Joint Nature Conservation Committee's Uplands Lead Co-ordination Network 'This book draws together an impressive array of interdisciplinary studies to show how much we depend on the fragile habitats and landscapes of the uplands and what threats they face.
