CiteSeerX — Geophysical applications of nuclear resonant spectroscopy

The exciting new developments in the high-pressure field have drawn growing attention from scientists in geophysics and other fields. Email: Announcements Call for Paper: Geophysical Technologies and their Applications in Carbonate Reservoir GTACR Edited by: Pinbo Ding, Chi Zhang, Xueshan Yong, V.

High Pressure Processing (HPP) Advantages

High-Pressure Falling Sphere Viscosimetry of Basaltic and Dacitic Rocks in Conjunction with Synchrotron Radiation Mueller, H. Some full text articles may not yet be available without a charge during the embargo administrative interval. The physical mechanism of nuclear resonant scattering and the specifics in applications to Earth materials are presented with reference to several high-pressure studies on iron-bearing compounds.

This volume contains details of selected recent developments and will serve as a technical reference and handbook for both graduate or advanced undergraduate students as well as more senior researchers interested in keeping abreast of these new developments.
