## Five ways to reduce crime

Without income ceiling, higher income families may competitively raid low income housing resulting in ever under-supply situation for the poor as outlined by Pugh 2001. For this purpose, a plan was set up under which the state governments could acquire land and plots at suitable places, develop them and give them away to the needy people. The private sector, as the other partner, would be encouraged to take up the land for housing construction and invest in infrastructure facilities.

## Major problems facing Zimbabwe today

Cameras are most effective when there are a sufficient number of them and they are monitored by trained staff. Occurring in parallel is the economic development that has significantly raised income and saw unemployment decline from double-digit in the 1960s to full employment in 1970s-1980s and 4 per cent in recent years with recession.

## From Informal Settlements to sustainable communities

Cases are grouped into four categories: squatters, relocation projects, upgrading projects, and transformation examples. The information in the PSLSD sample was organised in a very similar way but with some restrictions.

## Incremental Housing

The poor have become less poor. A Profile of Singapore Poverty Singapore land area of 690 sq km and GDP per capita of USD20,767 is ranked 25th on the 2002 United Nations Human Development Index with hardly any of its population living below the poverty line.
