Fast-moving mixtures of ash and gas, called pyroclastic surges, raced across the summit area and into the southwest rift zone during an eruption in 1790. In the past, people relied on volcanic material such as obsidian to make tools for hunting and processing food and traded it across vast distances.

The Earth's crust, on which we live and depend, is in large part the product of millions of once-active volcanoes and tremendous volumes of magma molten rock below ground that did not erupt but instead cooled below the surface. To convert degrees Fahrenheit to degrees Celsius, subtract 32 from degrees F and divide the result by 1. Please do share your comments.
