

In vitro and in vivo assessment of the platelet collection and storage lesion

University of Birmingham - In vitro assessment of platelet storage lesion in leucoreduced random donor platelet concentrates

Description: -

-in vitro and in vivo assessment of the platelet collection and storage lesion

-in vitro and in vivo assessment of the platelet collection and storage lesion

Notes: Thesis (Ph.D) - University of Birmingham, Department of Haematology, School of Medicine, Faculty of Medicine and Dentistry.

This edition was published in 1996

In vitro and in vivo evaluation of leukoreduced platelets stored for 7 days in CLX containers

These filters also have different structures: non-woven mesh for polyester filters and multiple-layer sponge for polyurethane filters.

Platelet storage and functional integrity

This method is based on the inactivation of bacteria by photoactive compounds in combination with ultraviolet light and can be performed directly before transfusion without further platelet manipulation. Background: Extension of platelet PLT storage and concomitant use of a bacterial detection system would provide logistical advantages by reducing outdating and improving patient care through promotion of the use of sensitive detection systems.

In vitro and in vivo evaluation of leukoreduced platelets stored for 7 days in CLX containers

Similar findings have been reported by others ,.

In vitro and in vivo evaluation of leukoreduced platelets stored for 7 days in CLX containers

The relative risk RR for PAS- versus plasma-stored platelets was 0.

In

This procedure is particularly advantageous in the case of platelet refractoriness, i. Evaluation of apheresis and pool platelet concentrates in German.
