## Nurseco - Cystic Fibrosis Nursing Diagnosis Care Plan

Nursing Care Plan Guidelines		
Admitted: _____	Diagnosis: _____	Occupation: _____
Religion/Culture/Ethnicity: _____		Date of Care: _____
<b>Patient goals &amp; objectives</b> "Patient will....." • This is what you want to happen to resolve/prevent the stated problem. Put in patient behavioral terms. • Goals help determine the nursing interventions necessary for the next column. • Goals must be realistic, specific, measurable, action oriented, & with a time frame. • You must be able to evaluate these goals (last column) so you must have criteria here that can be measured in some way. • Think of goals you as the nurse can help patient achieve with your interventions.	<b>Interventions</b> "I will....." or "patient will....." • Number & list specific actions you plan to help pt. achieve goals. • Use active language. • Think about this in documentable terms. • Do not use "encouraging" or "try" words that are vague. • Use words like teach, explain, provide, monitor, administer, assess, consult/consultant, report, etc. • These are client specific & individualized. • Consider needs, preferences, limitations of patient. • Standardized care plans are fine, but you must individualize.	<b>I did.....</b> • Check list of items, one for each of the intervention is listed. • Place checkmarks to indicate that you did it, and if not, put in evaluation column WHY you did not.
