## Keramika

Atlas of Infrared Spectroscopy of Clay Minerals and their Admixtures, Amsterdam, Elsevier Scientific Publishing Company, 1976. Characteristics have been discussed of microstructure, phase composition and rheological properties of powders obtained by chemical dispersion of alloys Al-Mo, Al-V and Al-Zr with 10 wt. Підвищення температури рідкої фази в процесі випарювання і горіння крапель свідчать про послідовне фракційне випарювання спочатку легких, а потім більш важких вуглеводнів, температура пароутворення яких більш висока.

## Rating of Dynamic Coefficient for Simple Beam Bridge Design on High

Theory and Application of High-Power Nanosecond Pulses to Processing of Mineral Complexes, Mineral Processing and Extractive Metallurgy Review, 2011, vol. Gold ore veins, geology, mining conditions, geotechnology, ore loss, ore dilution, self-propelled machine complexes, broken rock backfill REFERENCES 1. Seismic events, earthquakes, open pit mines, mining operations, curves of time of occurrence, deep faults, seismic station network, P-waves and S-waves, geodynamic monitoring REFERENCES 1.

## Solid Solutions Formation Mechanism in Cordierite

Factors Affecting and Methods of Measuring Material Properties at Temperatures above 1400°C 2550 F , New York: Wiley, 1959.

## Nicotinamide solvation state in aqueous dimethyl sulfoxide, Russian Chemical Bulletin

In assembly, the errors in the machine parts logical dimensional chains; 2 derivation of the quan employed are due to their manufacture. As the Tytkesken-2 ceramics demonstrate, using hair as armature was a local tradition, practiced in some measure from the Early to the Final Neolithic period. Congress Glass, San Francisco, California, ICG 18 Meet.

## The early neolithic pottery of the volga

Stress-strain state, mathematical modeling, strength properties, stability criteria, excavation stability REFERENCES 1. Lithology Correlated Events, Induced Stresses and Deformation, Pure and Applied Geophysics, 1990, vol. It is established that low-basicity slags in mixtures with

natural or technogenic alkaline aluminosilicates form highly efficient low-plasticity compositions suitable for the underwater colmatage of the basements of hydraulic structures or the burial of hazardous wastes.
