The scientific and trade literature are scanned for information on safety and health hazards surrounding chemicals encountered in the chemical and related industries, with over 250 items published online every month.

## Flash Point and Autoignition Temperatures

In addition, the authors have considered it necessary to include a series of new sections. However, as a corollary to this concept, to maintain process safety and continuity, the overheating. It contains a database of around 70,000 reactions and around 4000 of the most frequently consulted reagents and is fully searchable by structure and substructure, reagent, reaction type, experimental conditions etc.

## Chemical Compound

Backward chaining is used for vent area calculations, whereas forward chaining is used for data validations, input queries. Over 75% of the original material is published in English, with other major languages being French and German, Russian and other eastern European languages, Chinese, and Japanese.
