We were excited to discover that some LIS graduates were employed and that many had been employed for more than two years. The implications are that LIS graduates from the University of Zululand are marketable. However, it was quite unexpected to find out that their main employer was the government, and that most were employed by libraries. We had expected a considerable number to work in the private/enterprise sector as records managers, information and knowledge specialists, archivists, web developers, or teach ICT literacy in schools. We believe that the graduates did not expect libraries to be their main employer, hence their dissatisfaction with BA (IS) and not necessarily the department. We also note that some graduates are fulfilling such jobs like such standing, spin markers even at the University of Zululand Library with their University degree for sometime that is discouraging. This applied especially to Information Science graduates who had studied mostly information technology (IT) related courses.

As much as the LIS graduates were happy with the knowledge and skills they obtained from the department, they were not happy at all with the curriculum that was offered to them. We have however, revised the curriculum and implemented changes since 2010 and will continue reviewing BA (IS) regularly. We have introduced the changes that would make graduates employable in library environments where cataloguing and classification is essential. The fieldwork for BA (IS) is being introduced in 2011, but the BLIS fieldwork (general module and activity) has existed all along. Our challenge is to introduce fieldwork in the 3rd year BA (IS) programme through service learning. Interestingly, our curriculum reviewers (external assessors) find the programme (BA-IS) to be quite appropriate. They have also emphasized the need for fieldwork and the integration of Library Integrated Systems in the programme. We have appended our undergraduate qualification programme for readers.

Nevertheless, the above highlighted also showed contradictions. Respondents stated that the skills that they obtained from LIS were relevant to their respective jobs. On the other hand, they were not satisfied with the DES curriculum. Some respondents, particularly B.A. Information Science graduates, complained about doing IT related modules instead of core Library Science modules (cataloguing and classification), despite the fact that BA (IS) is 50% IT and 50% LIS. It would be impossible to keep up with the times otherwise. Despite all this, we take note of the outcome of this study seriously for curriculum review and development.
