Resilient Florida

A technique for predicting in-stream flow requirements of benthic macroinvertebrates. Biologic productivity is high and the nutrient load is also high.

Relations between lake trophic state and nitrogen and phosphorus loading rates

For environmental management, a scale of 10 to 100 years is the usual period of interest or concern. Some are also in the process of evolving a comprehensive monitoring program Saleem et al. The effects of geology and land use on the export of phosphorus from watersheds.

EIS

Effects of I-90 construction activities on spawning success of kokanee *Oncorhynchus nerka* in Coeur d'Alene Lake. Variations in gravel bed composition of small streams in the Oregon Coast Range.

Resilient Florida

Registration can be done in advance or at the time of the events. Binford, Mark Brenner, Thomas J.
