The Classification of Finite Simple Groups has had many applications to other areas of Mathematics, and Bob Guralnick is one person who has highlighted many such applications, if anyone is inclined to search for explicit examples. We should mention a few of the books Conway has written, and illustrate their importance and originality with a brief comment from a reviewer.

Also included are diagonal involutions corresponding to octads trace 8 , 16-sets trace -8 , and dodecads trace 0. Zemlin, On a Conjecture Arising from a Theorem of Frobenius, Ph. Feit, The Representation Theory of Finite Groups, North-Holland, New York, 1982.

M 24 and thus the monomial subgroup have 2 classes of 3-elements, but there 4 classes in Co 0 and Co 1. Conway was awarded the Berwick Prize by the in 1971.

A look at a character table should answer whether a 24-dimensional representation over \mathbb{Z} exists.
