Some saw home economics as a vehicle for creating vocational and economic opportunities for girls and women and for educating boys and men about domestic skills, while others sought to enforce traditional models of sex roles and family life. Frustrated by the lack of opportunity for educated women in the male-dominated disciplines, they met at the Lake Placid Club in upstate New York to create their own interdisciplinary field of study and profession.

### The History of Environmental Science in America

Discovery of new species and natural phenomena was the primary focus of science for several centuries. So if we are studying fish, its environment is the water it lives in, the temperature and chemical makeup of the water, the type of climate of the lake or pond, how much rain it gets, average daily temperatures, what type of other fish live in the lake, presence of algae or plants, and the list goes on and on. Emphasis in environmental

science has shifted since the 1960's and 70's from more localized environmental issues to global issues such as climate change, melting polar ice caps and damage to the ozone layer.

This requires increased critical thinking and moral reasoning; theoretical and interdisciplinary work; evaluation of existing social practices, norms, and assumptions; and emancipation from ignorance and distorted views resulting from such things as prejudice, trauma, repression, oppression, and useless conventions. In the 1960's, Rachel Carson's book *Silent Spring* highlighted and warned against the effects of chemical pollutants on our environment.
