Bergey's Manual of Systematic Bacteriology (豆瓣)

Thermomicrobium is an aerobic thermophilic chemotroph possessing unusual lipids that contain 1, 2-dialcohols instead of glycerol, and have neither ester nor ether linkages. The majority of gram negatives will be found in part B.

The second edition differs from the first in that clinically relevant species are not grouped together into two volumes. This Board, under the auspices of the Society of American Bacteriologists who, then as now, published the Journal of Bacteriology as a service to science, brought the first edition of the Manual into print in 1923. The details of each volume in print Volume 1 , in press Volume 2 or in preparation Volumes 3-5 follow.
