

Limnological and planktonic studies in the Waterton Lakes, Alberta

Environment Canada, Wildlife Service - Spatial and Temporal Dynamics of Invasive Freshwater Shrimp (*Mysis diluviana*): Long

Description: -

Plankton -- Alberta -- Waterton Lakes
Limnology -- Alberta -- Waterton Lakes
Limnological and planktonic studies in the Waterton Lakes, Alberta

-
Religion heute-extra -- 88

Occasional paper (Canadian Wildlife Service) -- no. 27
Occasional paper / Canadian Wildlife Service -- no. 27
Limnological and planktonic studies in the Waterton Lakes, Alberta

Notes: Abstract also in French. Bibliography: p. 37-39.

This edition was published in 1976

Filesize: 46.79 MB

FADA database

Crustaceana 22 3 : 249-258. This supports our observation that years with abundant resources were coherent with low *Mysis* abundance and vice versa, demonstrating that *Mysis* are driving lower numbers of basal resources and are not limited by food availability.

Spatial and Temporal Dynamics of Invasive Freshwater Shrimp (*Mysis diluviana*): Long

I highlight contemporary land use changes that could impact flows within the Nile Basin.

Gold mine project underway in in rural Nevada

Using elevated specific conductance SC in stream water as an indicator of mining influence, we evaluated relationships between SC and Se concentrations in macroinvertebrates and examined dynamics of Se bioaccumulation in headwater streams.

Gold mine project underway in in rural Nevada

Flathead Lake is deep mean depth 44 m, maximum depth 116 m: 48% of the volume is 0—40 m, 30% is 40—75 m, and 22% is greater than 75 m in depth. A fertilization and monitoring project was initiated in 1999 with the intent of reversing the oligotrophication of the reservoir. Achuff, Parks Canada, 1984 R.

Genetic assessment of species boundaries in the North American *Daphnia longispina* complex (Crustacea: Daphniidae)

Vera, extract from Mountain Pine Beetle Symposium: Challenges and Solutions, October 30-31, 2003 Draft 2 E. Abstract: This study applies an optimized phytoscreening method to locate a chlorinated ethene plume discharging into a stream.
