## Front Matter

Evans isolated vitamin E from wheat germ. HAYMAN, Administrative Assistant Page vii COMMISSION ON LIFE SCIENCES BRUCE M. Older children had lower intakes than younger ones and females had lower intakes than males.

## Current Policies

However, the diagnosis of T2D has increased dramatically in children and adolescents and is related to body fatness. The percentage of children and adolescents who skipped breakfast on the day of the survey increased with age: 8 percent of those aged 6—8 years, 14 percent aged 9—13 years, and 31 percent aged 14—18 years. The National Health and Nutrition Examination Survey NHANES III 1988—1994 found an increase from 7 to 11 percent in obesity for 6- to 11-year-old children, compared to NHANES II a decade earlier 1976—1980 Ogden et al.
