

Protein metabolism and nutrition - proceedings of the VIIIth International Symposium on Protein Metabolism and Nutrition : Aberdeen, United Kingdom, 1-4 September 1999

Wageningen Pers - Leucine oxidation as influenced by size and frequency of meals with a different protein content — Research@WUR

Description: -

-

Risk.

Urology.

Spaceborne experiments.

Metabolism.

Proteins -- Metabolism -- Congresses.

Proteins in animal nutrition -- Congresses.

Proteins -- metabolism -- Congresses.

Amino Acids -- metabolism -- Congresses.

Animal Nutrition -- Congresses. Protein metabolism and nutrition - proceedings of the VIIIth International Symposium on Protein Metabolism and Nutrition : Aberdeen, United Kingdom, 1-4 September 1999

-

EAAP publication -- no. 96. Protein metabolism and nutrition - proceedings of the VIIIth International Symposium on Protein Metabolism and Nutrition : Aberdeen, United Kingdom, 1-4 September 1999

Notes: Includes bibliographical references.

This edition was published in 1999

Pyranose oxidase, a valuable alternative for glucose oxidase in breadmaking? Use of ^{15}N -labeled egg protein in pound cake making to unravel the participation of proteins originating from different ingredients in the formation of a product quality-determining protein network: A focus on egg white protein and wheat flour gliadin. Activation of the voltage-gated sodium channel underlies the upstroke of the cardiac action potential, its subsequent inactivation being fundamental to the establishment of a refractory period.

Leucine oxidation as influenced by size and frequency of meals with a different protein content — Research@WUR

Consumption of breads containing in situ produced arabinoxylan oligosaccharides alters gastrointestinal effects in healthy volunteers. Conclusion Permanent interaction between perfusion and CoP and plantar pressure seems to exist and to mutually influence each other even in the orthostatic position, however, although these variables are poorly understood. The way to deal with trace mineral needs in organic farming will mainly depend on the own-farm husbandry and management practices.

Leucine oxidation as influenced by size and frequency of meals with a different protein content — Research@WUR

The PRISMA guidelines Moher et al, 2009 and CASP checklists Critical Appraisal Skills Programme, 2019 were used for screening and appraisal, respectively.

The search results were reviewed by two authors EA and MC independently, first by title, followed by abstract and finally by full text. There was a significant decrease in cT1, while cT2 increased. Inactive fluorescently labeled xylanase as a novel probe for microscopic analysis of arabinoxylan containing cereal cell walls.

Physiology 2021

This would suggest the pH effect on GLP-1 secretion is Na⁺-dependent. It resulted in delay of reflected wave peak return and decrease of the pressure load to be overcome by the left ventricle, without decreasing maximum pressure in aorta.
