

# New methods of laying seabed tubes

## Institution of Civil Engineers, Northern Ireland Association - Methods of laying seabed pipelines

Description: -

-New methods of laying seabed tubes

-New methods of laying seabed tubes

Notes: Lecture delivered, Monday, 11th December 1967, before The Institution of Civil Engineers, Northern Ireland Association, session 1967-1968.

This edition was published in 1967

### Alternative Pipelay Methods

Extremely high load-carrying capacity floating cranes are the norm nowadays, and these are mainly available on hire from suppliers all around the world. As one function of the top supports 4 is to permit sliding and as they will ultimately end up being grouted in order to secure the connections for permanent use, the preferred shape of the top support s 4 is a concentric tube or pipe of larger diameter than the J-tube.

### Optical Submarine Cable Laying Method Laying Procedure

It is anticipated that only the lowest top support 4 will need to be opened to allow the J-tube to drop.

### New methods for aquafarm mooring

Deck fabrication sites typically have the capacity to fabricate and load out structures in the range of 15,000 to 25,000 tonnes in weight hence a loaded carousel of 15,000 tonnes is considered feasible. Typical diameters for the upper section 1, the curved section 2 and the lower section 3 are between 300 and 350 mm.

### Optical Submarine Cable Laying Method Laying Procedure

The movement of the cable 12 is indicated by the arrows in FIG.

### Optical Submarine Cable Laying Method Laying Procedure

The Statoil-led PRS consortium is also developing a repair system for deepwater based on remotely welded sleeves. At the fabrication stage or prior to transportation, the J-tubes may be installed within the top support s but not permanently fixed. This lower section 3 is also formed from a section of pipe and is substantially vertical.
