Telecommunications Industry Market Research

Information and Communication Technologies ICT is a term that is used to help describe the relationship between the myriad types of goods, services and networks that make up the global information and telecommunications system. If cellphone owners are dropping their landlines, while VOIP over cable takes even more landline customers away, then the best weapon that traditional telcos can use in their battle for market share is very high-speed internet. Or, should it be considered as services only, such as subscriber lines and data networks? Wendy Stotts, Manager, Carlson Companies-Information Center No other industry touches as many technology-related business sectors as telecommunications, which, by definition, encompasses not only the traditional areas of local and long-distance telephone service, but also advanced technology-based services including wireless communications, the internet, fiber-optics and satellites.
