Mateker, Qian Zhang, Bin Kan, Dylan Sarkisian, Xiaofeng Liu, John A. Systematic device physics and charge generation dynamics studies, including optical simulation, light-intensity-dependent current—voltage experiments, photocurrent density-effective voltage analyses, transient absorption measurements, and electrical simulations, indicate that the significantly enhanced performance using inverted device is ascribed to the increasing of J_{sc} compared to the conventional device, which in turn is mainly attributed to the increased absorption of photons in the active layers, rather than the reduced nongeminate recombination. Thus it's normal to see a large City a Municipality have jurisdiction over some small cities in China.
