Theoretical expressions of the harmonic line shapes, including the effect of laser amplitude modulation and varying modulation depth, are presented. It is found that the approximate analytical solution correctly predicts the propagation velocity of the leading discontinuity and the flow parameters at this discontinuity. Spectral line intensities and self-broadening parameters were determined by fitting the measured spectra with

Voigt, Galatry, and Rautian lineshape models.

Antony Jameson's Home Page, Dept. of Aeronautics & Astronautics

Numerical methods used for the determination of hypersonic flowfields, including chemical effects, are presented and applied to steady and unsteady configurations. Special Issue: Fortieth Anniversary of the Universal Declaration of Human Rights p. Environmental and Ecological Statistics, 84, 361—377.
