All must be done in an ethical way. The analysis looked at variations between students to generate the existence of different categories of epistemological belief, and at the changes within students to describe a developmental pattern.

Rethinking University Teaching: A Framework for the Effective Use of Educational Technology

He acknowledged the importance of cognitive processing but did not then have the means to take it further than one brief paragraph. Eysenck and Warren-Piper, 1987:209—210 It is true that molecules can be experienced, but the very fact that we have to dragoon other such disparate experiences into service in order to experience them demonstrates how different that is from the way a dog is experienced. The unity between problem, context and solution is not quite so apparent here.

Rethinking University Teaching : Diana Laurillard : 9780415092890

But the use of assessment has been largely unreflective practice by the teaching profession.

Laurillard, D. (2002). Rethinking university teaching A conversational framework for the effective use of learning technologies (2nd ed.). London Routledge Falmer. doi10.4324/9780203304846

In their more recent analysis of teaching strategies, Marton and Booth discuss at length the ways in which phenomenography can contribute to better learning. Therefore, an ever-replenishing waterfall whose rate of flow is not governed just by what you put in its way, but by the quantity of water available, is an inappropriate analogy. The tendency to adopt a certain approach, or to prefer a certain style of learning, may be a useful way of describing differences between students.
