combining these data to determine their separate impacts on outcome variables.

## Faculty Research Clusters

The manipulation approach asks what happens when we actively manipulate the cause: Does it lead to the putative effect? The inter-quantile range is the range of values taken by the middle 50 percent of cases—inter-quantile because the endpoints are a quantile above and below the median value. Most texts jump right into inference after descriptive statistics, but the authors add a chapter on probability before discussing inference, which is a nice addition.

## Research Methods for Political Science B

Like Gamma, Tau ranges in value from—1.

## Research Methods Courses

Seeley has rightly said, We must think, reason, generalize, define, and distinguish.

## Faculty Research Clusters

Topic 20:Designing a sample Overview Probability versus non-probability sampling Simple random samples Systematic random samples Proportionate stratified random samples Disproportionate stratified random samples Multi-stage random cluster samples Convenience samples Purposive samples Quota samples Probability versus non-probability sampling In probability or random sampling, every member of the population has a known and non-zero probability of being included in the sample. General conditions for global intransitivities in formal voting models. Public Opinion Quarterly, 28: 273—86.

## Political Science Methodology

Multilevel methods provide a way of

Creating a Cross-Tabulation nominal-level relationship I The first step in describing the relationship between two variables is to arrange the data so that we can get an initial visual impression of the relationship.

## **Research Methods**

Internal Validity -absolute basic requirement of a research design A research design has internal validity when it enables us to infer with reasonable confidence that the IV does indeed have a causal influence on the DV.

**Political Methodology: Research Subfields: Research: Department of Political Science: Indiana University Bloomington**

The Trade-Offs involved in observational research Ethical considerations, reactivity and access.
