What is the role of the pharmacist?: physicians' and nurses' perspectives in community and hospital settings of Santiago de Cuba

The first page showed the objectives of the study, the second and third ones contained the questionnaire and other data required from the patient two sides printed. The present study demonstrated the close role perceptions of both professions and their high level of agreement on the potential for further collaboration in the clinical roles of pharmacists, which would be of importance to the establishment of collaborative practice in the primary healthcare settings of Kuwait.

Atenção Farmacêutica como construção da realidade.

Perspectives of primary care physicians and pharmacists on interprofessional collaboration in Kuwait: A quantitative study

Several studies have focused on the effects of physician—pharmacist collaboration on patient outcomes, and on the development of conceptual models to describe the stages and characteristics of collaboration and integration between physicians and pharmacists and services.

A Pharmacist's Perspective

Centers for Disease Control and Prevention. The resulting survey was then peer reviewed to establish content validity. Interestingly, both professions agreed that the most important barriers towards physician-pharmacist collaboration were lack of time, lack of financial compensation, lack of face-to-face communication, and the possible fragmentation of patient care by the involvement of multiple healthcare professionals.
