This is a researcher connected to the World Federation of Chiropractic (WFC), telling a group in Berlin & the world how subluxation & the need for imaging is 'rubbish'. This video was filmed at their annual conference (from a few weeks ago).

Some chiropractic groups are requesting a formal apology from the WFC and to remove this chiropractor and any other 'subluxation deniers' from anything they do. Please help spread the word.

It's time to start a revolution against the Subluxation Deniers. The detection and correction of Vertebral Subluxations is what makes Chiropractic Separate and Distinct. The WFC needs to issue a formal apology for condoning subluxation deniers on their stage. Contact them and let them know how you feel if not you, Who? If not Now, When? <https://www.wfc.org/website/>

A growing number of athletes use chiropractic care as a regular part of their training for injury recovery, prevention, and optimum performance. Chiropractors are specifically trained to identify and correct the vertebral subluxations that occur in your spine and nerve system in order to help you live well, naturally.

Chiropractic Care of Cervical Spine Subluxation

In this lecture the current research on chiropractic as it applies to an evidence based, subluxation and wellness model will be discussed. The development of a patient centered, shared decision making model for the clinical management of patients based on the principles of chiropractic are inextricably intertwined with the importance of research to the chiropractic profession and its clinical meaningfulness.
