These limits are constructed so that if the process is operating under a stable system of chance causes, the problem of an observation falling outside these limits is quite small. In other words it is process of placing orders on the buyers and the processing department for the material and other parts needed to manufacture the product and to arrange the ordering quantity and delivery schedule in such a way that all items are delivered in time to meet the production programme. The overall objective of inventory management is to achieve satisfactory levels of customers.

Production control system in the underground mine of Chuquicamata

Quality control uses inspection as a valuable tool. While generating the production order, the system takes cognizance of the number of hours needed for the order and capacity of machines and work centers and availability of materials and components.

Production Planning and Inventory Control

Planning and control are an essential ingredient for success of an operation unit. Giving managers excessive or irrelevant information is as serious a problem as is inadequate information. The dispatching function is greatly affected by machine breakdowns, tooling breakdowns, material delays and absenteeism.
