## Regulatory frameworks for demand side management

This feature makes these approaches attractive when monitoring is difficult or emissions must be estimated e. Also a number of ailing states accepted FRP which puts stringent conditions on utilities to improve performance. For example, policymakers may wish to ensure clean-up of future pollution by firms.

### Economic Incentives

Drivers The availability of legislative policies and regulatory frameworks that directly facilitate the implementation of DR utilities is fundamental in DSM. Liability Rules Liability assignment is most often targeted at producers of waste or emissions that are easily identifiable and hazardous to public health. Allowances can be doled out through grandfathering, where polluters receive free allowances based on their historic emissions levels i.

### Madhya Pradesh Electricity Regulatory Commission (Demand Side Management) Regulations, 2016

Demand response is only needed occasionally and just for a few hours during the critical time. For example, subsidies, deposit-refund systems, and information disclosure shift the burden of proof to demonstrate compliance from government to regulated entities.

### Madhya Pradesh Electricity Regulatory Commission (Demand Side Management) Regulations, 2016

This policy intends to stimulate energy efficiency to do the following five things: provide quick power system relief; be a cheaper alternative to new generation; support SME growth; reduce greenhouse gas emissions; and reduce users energy bills. These findings have been grouped according to the key elements of the survey: Regulatory framework The DSM programs offered by utilities operate under both PBR and cost of service regulatory regimes.

### Demand Side Management

Supply side management refers to measures adopted to ensure the generation, transmission, and distribution of energy are conducted efficiently as shown in Fig. Some of the key findings of this survey are described below. Although non-point sources are not regulated under EPA, the pollution emitted from a non-point source is.
