Comparing Fractions

EXAMPLE 4 Solve for x.

Four dimensions

I doubt that you can as well. They represent two equivalent ways of describing the same relationship between the two numbers 5 and 7.

SQL: Combining the AND and OR Conditions

For example: Example 4: When asked to write two hundred thousandths as a decimal, three students gave three different answers as shown below. In words we can state this principle thus: Division Principle If both sides of an equation are divided by the same nonzero number, the results on each side are equal in value.

Four dimensions

EXAMPLE 2 Solve for t. The coefficient of x may be 1 or -1. But where are we to put the fourth axis to make a four dimensional space? The number to add to both sides of the equation is precisely this additive inverse.
