## Genetics and the Origin of Species

Under the pressure of natural selection, it spread quickly through the local population. Dobzhansky was soon to realize that chromosomal mutations could also play important roles in the evolution sweepstakes. The history and evolution of plants can be traced back by about one billion years.

## (NAS Colloquium) Genetics and the Origin of Species: From Darwin to Molecular Biology 60 Years After Dobzhansky

Most people of East Asian and Native American ancestry possess at least one copy of the variant, known as 370A, and many possess two. Darwin brought about the idea that species emerge, change, and split. His favorite composer was Beethoven followed by Bach and other baroques; he loved Italian operas, but had little appreciation for most twentieth century music and a definite distaste for atonalism.

## Genetics and the Origin of Species (Third Edition Revised)

While the genetic difference between individual humans today is minuscule — about 0.
