### Экспериментальные исследования инновационных конструкций пологонаклонных термостабилизаторов грунта

Keywords: steam and gas combined cycle plant, adjustment of aerodynamic channels, and the flow structure visualization. The problem of minimizing the length of a two-section heater is formulated and solved taking into account energy and technological limitations. NTU «KhPI» Bulletin: Series «Power and Heat Engineering Processes and Equipment».

### Hydrodynamics and heat transfer in swirl flow under conditions of one

Determining the Geometric Parameters of the Sealing Units of Turbogenerators with the Hydrogen Cooling. The advantages and disadvantages of the steam cooling structure of gas turbines have been discussed. The calculation results are confirmed in the numerical experiment by the Monte Carlo method.

### Heat and Mass Transfer in Anisotropic Bodies

Это вызывает создание вокруг термостабилизатора не круглоцилиндрической поверхности формирующегося «пльдогрунтового цилиндра» как принято в нормативных теплотехнических расчетах , а сложной пространственной неопределенной конфигурации зоны замораживания грунта, зависящей от конструкции и формы испарителя, вида и формы образующего ручья хладона, от температуры и других пока еще не до конца установленных факторов, что требует дополнительных специальных

экспериментальных исследований. Oblibenosti se těší ve zdravotnictví, ale třeba také v kuchyni nebo ve stavebním průmyslu. Coal Basins and Deposits in West Siberia Kuznetsky, Gorlovsky, Zapadno-Sibirsky Basins: Deposits in the Altai Territory and the Republic of Altai, Moscow: Geoinformtsentr, 2003.

### **Teplometry a vlhkocometry**

The mathematical design model of the studied engineering object was constructed on the basis of GOST21354-87 using the specific features of the design of high-speed tooth gears and it is presented as a computer program DMP-CEM. Derived temperature profiles reveal the observed picture of the fire gases trail under the roof of the mine working with its gradual disperse.
