Transurethral resection of the prostate (TURP)

It helps with making semen.

Transurethral resection of the prostate (TURP)

For a few days after the catheter is removed, the patient may have:

Transurethral Resection (TUR) for Bladder Cancer

This might last for up to 3 days. The dye is sensitive to light. TURBT, which is done using either regional or general anesthesia, takes about an hour.

Transurethral resection of the prostate

Strenuous activity, constipation, and sexual activity should be avoided for about 4 to 6 weeks. You may have blood in your urine for up to 2 to 3 weeks following surgery. You may also need blood tests and other tests.

Trans urethral resection of bladder tumour (TURBT)

The resectoscope has a wire loop at the end that's used to remove any abnormal tissues or tumors. This occurs mostly at the back of the prostate, but sometimes also occurs in the area where the prostate is enlarged due to BPH. This treatment takes between 15 to 90 minutes.

Transurethral Resection of the Prostate (TURP): Home Recovery

How you have it The surgeon puts a thin rigid tube called a cystoscope into your urethra. This procedure is also called a TURBT transurethral resection for bladder tumor. Why might I need TURP? You can eat and drink normally.

Transurethral resection of the prostate

Bruising and swelling You might get a small bruise around the area where they put the needle in for the cannula. The average hospital stay is three to four days.
