## Topographic Maps

Mortality assumptions at the census division level At the census division level, the mortality assumptions were developed using a ratio methodology. Over the projection period, the share of people aged 15-64 is projected to fall from 67. For calendar year 2020, the target was set at 341,000, with a plan for 351,000 in 2021 and 361,000 in 2022.

[public-docs.talentcoach.ir](http://public-docs.talentcoach.ir)

The long-term assumption of a net gain of zero is then reached immediately by 2020—21, remaining at that level for the rest of the projection period. Growth of this age group is projected to pick up in the early 2030s, to reach almost 4.

## Analysis Charts

Some census divisions of Northern Ontario tend to receive only a small share of international migration while experiencing net out-migration, mostly among young adults, which reduces projected population growth. Census divisions where population is projected to decline include: Cochrane, Algoma, Sudbury, Timiskaming, Nipissing.

## Analysis Charts

Under the low scenario, the total fertility rate is projected to decline from 1.
