### Inflatable Repair

First of all - do not panic. In fact, heat guns are used at the factory at the time of assembly. After deflating the tube, unscrew the valve completely.

### Questions & Answers

If you keep boat on a trailer or in a dock, then a hard floor will not be a problem for you. Allow adhesive to become tacky for 5 minutes, and then place patch on the damaged area. Anti-ventilation Plate: A large plate cast into gear case housing directly above propeller.

**Inflatable Boats: Selection, Care, Repair, and Seamanship: Trefethen, Jim, Trefethen, Clint: 9780070652521: public-docs.talentcoach.ir: Books**

If seam produces no bubbles at all, then issue is not with a seam, but with a surface puncture. The valve will lock in the open position. All boats come with a hand pump, repair kit, carry bag, aluminum oars, 4' rope and either an air or plywood floor.

**public-docs.talentcoach.ir: Customer reviews: Inflatable Boats: Selection, Care, Repair, and Seamanship**

I can't put the boat on a plane due to cavitation problems. Due to it's lighter weight, the boat can achieve a higher speed much easier than with a plywood floor. It is important to clean surfaces with Acetone or MEK, to remove any oils or residue that will prevent proper melting together.

### Questions/Answers

If you take good care of your boat, it may last 5-10 years. Therefore, it is extremely unlikely that brand new inflatable products are leaking air right out of the box. This allows the towline to slew back and forth in the bridle, and provides for tension on both sides of the bridle.
