The Social Self of Whitehead's Organic Philosophy

For the electron, the interaction is irreducibly concrete. There is no absolute dichotomy and magical transformation of matter into mind via some unknown causal line, as is the common concept today.

Whitehead's Philosophy of Organism by Emmet, Dorothy

The actual occasions ontologically constituting our experience are the elementary processes of concrescence of feelings constituting the stream of our experience, and they throw light on the what and the how of all actual occasions, including those that constitute lifeless material things.

Aspects of Whitehead's Philosophy of Organism

The suggestions which follow are not to be taken as such proposals. Setting these larger questions aside, and focusing just on processist work in the style of analytic philosophy, the explanatory force of a processist theory may depend on how well it addresses the following challenges.

Alfred North Whitehead's Philosophy of Organism

Thus, in addition to depending on their physical efficient causes, things also exist in dependence upon mental designation. But the creative advance involves both the accumulation and the reproduction of actualities.

Whitehead's Principle of Relativity

In Buddhism, due to our deep ignorance of dependent arising, we habitually perceive things as if they were separate essences. matter into mind via some unknown causal line, as is the common concept today.

Process Philosophy (Stanford Encyclopedia of Philosophy)

In these ways, the two principles ascribe to actual entities functions traditionally restricted to universals.

The Social Self of Whitehead's Organic Philosophy

Accordingly, the Category of the Ultimate gives expression to this ultimate fact about the universe: that it is creative and that by virtue of its creativeness its many entities are ever becoming one and are thus being increased by one. It fades and then recurs.

Alfred North Whitehead's Philosophy of Organism

Present-day contributions to analytical process philosophy are no longer driven by an attempt of making sense of evolution. In his Philosophy of Organism or Organic Realism, now usually known as Process Philosophy, he posited subjective forms to complement 's eternal objects or Forms. Thus there can be no events without duration.
