Guide to the Parasites of Fishes of Canada

The copepods typically found in marine aquaria usually favor a diet comprised of detritus as well as the bacteria often found within the detritus, utilizing the mouthparts that enable them to scrape and bite at the organic material. Since algae is a common source of food for amphipods and copepods, many hobbyists enduring issues with algae growth will introduce amphipods and copepods as a biological control.

Live copepods & amphipods feed picky fish & eat detritus in saltwater aquariums.

Fungus Saprolegnia : Symptoms: Tufts of dirty, cotton-like growth on the skin, can cover large areas of the fish, fish eggs turn white. Try Parachlorometaxylenol either as a bath solution 10 ml to one liter or mix it into their food.

Guide to the Parasites of Fishes of Canada

The popularity of such raw fish dishes makes it important for consumers to be aware of this risk.

Fish disease and parasites

Usually fish with more compressed bodies like angelfish and silver dollars. Luckily, these diseases are very rare.
