Security of automated teller machines

Audience This course is for end users, managers, programmers, operations staff, tech support staff, and entry-level data communications specialists. Students also learn the techniques of pseudo-conversational programming and prevention of task abends.

James Martin (author)

The client-server architecture is also termed as a network-computing structure because every request and their associated services are distributed over a network.

DBMS Architectures and Features

The principal CICS facilities covered are Task Control, Program Control, Terminal control, File control, Temporary Storage and design structure.

Teleprocessing synonyms, teleprocessing antonyms

The course focuses on the relational theory and concepts, and how DB2 adheres to them
