## Plastics Technology and Engineering (PTE) Program

Their tensile strengths range from 69 to 172 MPa 10,000 to 25. Tests include mechanical strength tests such as tensile and compression tests of typical packaging materials, and physical tests such as water vapor and gas transmission rate tests of barrier materials. A semester project is required.

## Plastics Technology and Engineering (PTE) Program

How Learning Will Be Assessed Learning will be assessed through a series of question and answer sessions. Plastics actually help protect the earth.

3

Characteristic features of aramid-reinforced plastics are low warpage and thermal expansion and uniform properties in all directions.

Undergraduate students who entered the university prior to Summer 2020 should follow the requirements published in the Bulletin edition from their entry year. On-Site Training Available ASTM can bring this course to your site! Information above was pulled on Saturday, February 13, 2021.

## Plastics Engineering Technology, B.S. | Penn State

In a linearly elastic material, G can be calculated from any two of these three parameters, since extension of the crack reduces the relative stiffness in a material-independent way. Students will learn how to make smart and informed decisions at all points throughout the packaging design process. Students perform their own packaging line design based on assignment of a specific product and operate machinery in the packaging machinery lab.

3

This book presents a basic account of the nature, applications, and engineering properties of this group of materials. Plastics engineering not only combines the concepts of form, fit, and function, which involves design principles, but also encompasses the knowledge of various scientific and

engineering fields that requires a good understanding of materials, their properties, processing methods, design principles, functional requirements, and the application. Our students have access to online course technical support 24x7, and our academic advisors are here to help every step of the way.
