Although, standard computer-vision techniques may be used template matching, region growing, etc. The first section introduces advanced image-based decision- support applications, and overviews computational methods and tools applied in decision-support systems. He is also an associated member of Biomedical Research Institute.

Disease Diagnosis Disease diagnosis is the identification of the nature of an illness or other problem by examination of the symptoms. Health-care professionals use symptoms and signs as clues that can help determining the most likely diagnosis when illness is present. Diagnostic imaging combines image processing and decision support methods to improve and accelerate case-specific advice in clinical environments.
