Because the medical problems of the male homosexual have been largely neglected, physicians until recently have not been

aware, for example, of Chlamydia as a cause of proctitis or amebiasis as a sexually transmitted disease. In the case of nonspecific urethritis, although it is extremely common in homosexual men, little progress has been made in diagnosis or therapy. There is, therefore, a considerable amount of material on hepatitis B and gonococcal infections, reflecting the recent explosion of research and clinical investigation in these two areas. The relatively high rates of incidence of many of these diseases among homosexually active men, however, and the large number of associated diagnostic and treatment problems have necessitated the collection into one volume of the information that is particularly relevant to the primary health care of this population. CAB Direct provides a convenient, single point of access to all of your CABI database subscriptions.
