Geology and Mineral Resources of the Ivanpah Quadrangle, California and Nevada. Hundreds of miners, most of whom lived in Landusky and Zortman, worked in mines that reached more than 600 feet deep to extract the gold and silver.

Geologic Road Signs

Stunted black spruce and tamarack dominate the vegetation of the Southern Hudson Bay Taiga. Lightly-built, agile and quick, this intelligent carnivore could run at speeds up to 25 miles per hour and was the perfect killing machine of its time. The type locality is near the Sultan Mine, Goodsprings District, Nevada.

Eastern Mojave Geology

Four nestling owl chicks were found on a ledge about 6 feet down the shaft.

USGS: Geological Survey Bulletin 1191 ()

The Monte Cristo Formation is a Mississippian fossiliferous cherty crystalline limestone, crystalline dolomite, massive limestone, and vitreous, cross-bedded quartzite. They milled around with groups of blond-haired Shasta ground sloths, and shaggy Musk and Shrub oxen.
