What is Rapid Prototyping?

Without good development skills, creating a native prototype might take too long. When complete the part may be cured in an oven to burn off the binding agent and fuse the powder into a coherent part. Rapid Prototyping helps designers present new concepts to board members, clients or investors so that they can understand and approve a development or product.

Based on feedback, identify areas that need to be refined or clarified.

Rapid Prototyping

Hammer out critical areas of your app or website and make sure they are meeting user expectations, needs, and wants. Often for runs above 5 pieces, urethane casting becomes more cost effective. This process, called stereolithography, builds objects by curing thin consecutive layers of certain ultraviolet light-sensitive liquid resins with a low-power laser.
