### Canadian Contraception Consensus (Part 2 of 4)

Obstet Gynecol 2006;108 5 :1107—14. The statement also recommends measures to help achieve this goal across Canada.

#### Canadian contraception consensus

Obstet Gynecol 2005;106 3 :509—16. Searches were updated on a regular basis and incorporated in the guideline to June 2015. A copper intrauterine device can be used for emergency contraception up to 7 days after unprotected intercourse provided that pregnancy has been ruled out and there are no other contraindications to its insertion.

#### Universal access to no

The literature searches and bibliographic support for this guideline were undertaken by Becky Skidmore, Medical Research Analyst, Society of Obstetricians and Gynaecologists of Canada. This document reflects emerging clinical and scientific advances on the date issued and is subject to change. Les Canadiens sont exposées à des risques de grossesse non planifiée pendant une partie considérable de leur vie.

### Canadian Contraception Consensus (Part 2 of 4)

They have distinctive forms of heart failure, and their cardiac disease can be associated with pulmonary hypertension, thromboemboli, complex arrhythmias and sudden death.

#### Contraceptive care for Canadian youth

LARCs include the copper intrauterine devices IUDs, the hormone-releasing intrauterine systems IUSs and the subdermal progestin-releasing implants, which are not available in Canada at the present time. Continue this dialogue into adult care whenever possible. To that end, they must: a.

[PDF] **The Recognition, Assessment and Management of Dementing Disorders: Conclusions from the Canadian Consensus Conference on Dementia**

This difference in effectiveness is more pronounced as the time from unprotected intercourse increases, especially after 72 hours. Baseline data from a randomized controlled trial. It was also reviewed by representatives of the Society of Obstetricians and Gynaecologists of Canada and the College of Family Physicians of Canada.
