Therefore, early fruit development offers an interesting model for studying plant organogenesis, especially in the regulation of cell division and cell expansion phenomena.

Abscisic acid and desiccation

Rapid flow cytometric analysis of the cell cycle in intact plant tissues.

Two-hybrid experiments showed that PsSNF5 is functionally interchangeable with *Arabidopsis* BSH in the interactions with other components of the remodeling complex. It then dropped at 20 DPA and seemed to slightly increase during maturation. Treatment with the Fungus *Colletotrichum coccodes* Spores of C.

To analyze the systemic response, CDPK activity was determined in distal leaves of injured plants at 12 and 18. These data suggest that the function of the DS2 may be the protection of the nuclear DNA from desiccation.
