Sec. 300.8 Child with a disability

Students with disabilities are more than twice as likely to be suspended as students without disabilities, and the loss of instructional time increases the risk of repeating a grade and dropping out. Adverse effect on educational performance cannot, therefore, be based solely on discrepancies in age or grade level performance in academic subject areas.

Inclusion of Children with Hearing Impairment in Schools: A Survey on Teachers' Attitudes
Sarithi S Prakash*

ABSTRACT

Purpose: Inclusion of children with disabilities in mainstream classrooms has become the focus of extensive research in education. It has both academic and social benefits for all students, such as providing opportunities for communication and interaction with other students. This study aims to explore towards inclusion appears to be a good method to determine the success of the programme. Although this has been widely researched in many countries, the available literature on the same is very limited in India. Hence, the purpose of this study is to examine the attitudes of teachers towards inclusion of children with hearing impairment in schools in Andhra Pradesh in India, to assess and compare teacher attitudes towards the inclusion of children with hearing impairment in schools.

Method: A questionnaire developed by Giles and Tait (1995) measuring three domains - (1) effective strategies for meeting the needs of all students, (2) the support for educational change in their district, and (3) inclusive education - was used. The survey was conducted among 100 teachers who were teaching in the test tool. A hundred teachers of various Government and non-Government schools in 2 districts of Andhra Pradesh, India, participated in the survey.

Results: The results indicate that there is a need for intervention to foster more positive teacher attitudes towards the implementation of inclusive education to be successful. It also has implications for the funding of laws and policies for children with hearing requirements.

Key words: Inclusive education, hearing impairment, teachers' attitudes

Therefore, the section that follows provides guidance to educators in interpreting the definition for identifying or re-determining eligibility for special education under this classification.

Definition and Interpretation

Pupils with impaired hearing encounter more difficulty scholastically than other children with sensory disabilities.

GREEK TEACHERS STUDY CITY'S SCHOOL PROGRAMS

Such children need the help of child guidance specialists and a mental hygiene approach. Such programmes need early admission in schools, skipping grades telescoping grades, early admission in secondary schools and colleges and enrichment activities and materials.
