The Future of Educational Entrepreneurship

Business Essentials explores marketing, finance, management, and operations as they pertain to organizational innovation and venture creation—both generally and in particular to schools, universities, and educational organizations. For example, a 2016 NBER study showed that of the various approaches to school spending reform, fiscal initiatives that guarantee a baseline amount of per-pupil funds—otherwise known as foundation plans—were the most effective in increasing overall per-pupil spending and reducing funding disparities between poor and affluent districts.

Education Reform

Rodriguez, the father of four children enrolled in the Edgewood district, was frustrated that the schools were dramatically underfunded and marred by dilapidated facilities and weak instruction.

Education Foundations uses leading research, case studies, simulations, EdLab site visits, and lived experience to dive deep into the connections between education philosophy, practice, culture, and innovation.

Future of Educational Entrepreneurship: Possibilities for School Reform by Frederick M. Hess

For example, a 2016 analysis found that states that fully embrace standards-based reform are more successful at improving the academic outcomes of low-income students, while states that are more resistant to adopting rigorous assessments post poorer results. He has inside knowledge of the promise and the disappointments of school reform.

High School Reform

Such reforms make more data available to evaluate the quality of every public school and ensure that students are held to the same high levels of performance—irrespective of their race, income, or ZIP code. In fact, the study found that spending increases improved high school graduation rates among low-income students and increased their adulthood earnings by 10 percent. This Is The Education Reform America Needs

It also maintains a requirement that every school must disaggregate student performance by student population—such as students from low-income families, English language learners, homeless and foster youth, and more. Yet students in poverty are less likely to attend preschool programs. Persistent inequities in education funding. The local, state, and federal role After 50 years of state school finance litigation and school finance reform, some states have minimized inequities in per-pupil education across districts within state lines.

Future of Educational Entrepreneurship: Possibilities for School Reform by Frederick M. Hess

Historically, the federal government has focused its investment in supporting education and related services on the most at-risk children, and it can uniquely address inequities in per-pupil spending across states.
