Soils and Foundations

Papers which have been published in such settings as conference or society proceedings, symposium reports, university or research center journals, or company-internal reports will be regarded as predominantly having the character of brief notes or materials i. When compacted and moist it holds together fairly well, and if compacted these make for good soils to support a foundation because of their non-water-retaining properties. It is very poor subsoil and not ideal for support, as foundations are most stable on soil that does not shift or change structure.
