### Statistics Explained

Households were the main source of GHGs in four Member States. Together, the articles make up an encyclopedia of European statistics for everyone, completed by a clarifying all terms used and by numerous links to further information and the latest data and metadata, a portal for occasional and regular users. For urban mobility, regardless of the day work or non-work , the private car is mostly used as a driver or as a passenger in all the 12 Member States covered.

### Statistics Explained

In further six countries transportation and storage activities were the main source of greenhouse gas emissions. In 2018, more than one in ten enterprises in the EU-27 non-financial business economy belonged to the tourism industries see Table 1, Table 2.

### Statistics Explained

The share ranges from 57 % of the total daily distance travelled in Romania to 80 % in Slovenia. Enterprises in industries with tourism related activities accounted for 9.

### Statistics Explained

Public transport bus and coach, and urban rail combined is most frequently used in Romania and Poland both around 30 % of the distance covered. In nine EU Member States businesses supplying electricity, gas, steam and air conditioning were the main emitters of GHGs in 2019, while in eight more Member States manufacturing was the main emitter.

### Statistics Explained

. Statistics Explained is an official website presenting statistical topics in an easily understandable way. .
